Web page with my student id and name:

The screenshot shows a web browser window with the address bar set to 'localhost:3000'. The page title is 'Student Information System'. Below the title, it says 'Developed By: 101472495 || Mobinasadat Zargary || DevOps'. There are three input fields for 'Name:', 'Age:', and 'Major:'. Below these fields is a green button labeled 'Add Student'. Below the button is a section titled 'Student List' which contains a table with one row of student data.

Creating an optimized production build...
Compiled successfully.

File sizes after gzip:

  46.84 kB (+17 B)  build/static/js/main.a51f3bfd.js
  1.77 kB          build/static/js/463.fc4a4a08.chunk.js
  412 B           build/static/css/main.27ca76a1.css

The project was built assuming it is hosted at /.
You can control this with the homepage field in your package.json.

The build folder is ready to be deployed.
You may serve it with a static server:

  npm install -g serve
  serve -s build

Find out more about deployment here:

  https://cra.link/deployment

One of your dependencies, babel-preset-react-app, is importing the
"@babel/plugin-proposal-private-property-in-object" package without
declaring it in its dependencies. This is currently working because
"@babel/plugin-proposal-private-property-in-object" is already in your
node_modules folder for unrelated reasons, but it may break at any time.

babel-preset-react-app is part of the create-react-app project, which
is not maintained anymore. It is thus unlikely that this bug will
ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to
your devDependencies to work around this error. This will make this message
go away.

mobinazargary@Mobinas-MacBook-Pro week05_comp3104_lab_exec % ,
```

Compiled successfully!

You can now view **comp3104** in the browser.

Local: http://localhost:3000
On Your Network: http://10.0.0.148:3000

Note that the development build is not optimized.
To create a production build, use `npm run build`.

webpack compiled **successfully**

One of your dependencies, babel-preset-react-app, is importing the "@babel/plugin-proposal-private-property-in-object" package without declaring it in its dependencies. This is currently working because "@babel/plugin-proposal-private-property-in-object" is already in your node_modules folder for unrelated reasons, but it **may break at any time**.

babel-preset-react-app is part of the create-react-app project, which is not maintained anymore. It is thus unlikely that this bug will ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to your devDependencies to work around this error. This will make this message go away.
